ELSEWEDY
CABLES

Low Smoke Halogen Free

ELSEWEDY CABLES IN BRIEF

Elsewedy Cables was established in 1984 and is considered as one of the oldest and most successful industrial and trading business groups across the Middle East and Africa in the fields of energy, plastics and contracting. Elsewedy Cables is specialized mainly in Wires, Cables, Telecom Solutions, Electrical Products, Turnkey Projects, and recently Energy Generation. The group's turnover has been rapidly rising during the past few years to reach \$ 1.5 billion in 2007, also, the production capacity is the second highest one in the region, with 125000 tons/annum, expecting 212000 tons/annum in 2008.

Although the company began as an Egyptian local manufacturer, it has branched out regionally and internationally to include 23 production facilities for cables and electrical products that are located in 12 countries (Egypt, Sudan, Algeria, Zambia, Ghana, Syria, Saudi Arabia, Qatar, Slovenia, India and Malaysia), and it currently exports its wide range of high quality and safe products to more than 110 countries worldwide. Additionally, the group's outstanding human potential, which is more than 5000 employees, and its solid financial position, along with the strong geographical presence, have heavily contributed to the group's success and prosperity.

To strengthen its position world wide, and following the corporate strategy, on the one hand, Elsewedy Cables fully acquired by the end of 2007 ISKRAEMECO, a leader manufacturer of electrometers and currently the third largest player in the European market and the seventh largest globally; on the other hand, Elsewedy Cables is involved with 74% ownership jointly with Glencore International in a 850 \$US million project for the construction of a copper smelter to be located in Egypt.

Further more, Elsewedy Cables provides a complete portfolio of solutions and advanced technologies for sectors as diverse as the automotive and aerospace industries, railways, buildings, telecommunication and energy networks, oil and gas, submarine power systems, etc. Accordingly, Elsewedy Cables is divided in three segments in order to cover all those sectors: Wires & cables, electrical products, and turn-key projects. The group has obtained quality certificates from the most reputable laboratories, among them: ISO 9001-2000, ISO 14001, QS 9000, KEMA.a

Quality and safety are so much considered. Elsewedy Cables adopted a policy that assures maximum effectiveness and efficiency through processes and systems ensuring that every aspect of each company's activity is aligned to satisfy customer needs and all other objectives without wasting effort and with the use of the full potential of every person. Our organizational philosophy believes that customer satisfaction, health, safety, environmental considerations, and business objectives are mutually dependent.

In the industrial sector, we currently supply approximately 56% of Egypt's global market share of power cables, telecommunication cables, and lighting industries. In the export sector, as part of a worldwide marketing plan, Elsewedy Cables has branches throughout Africa, Middle East, Gulf Area, Europe, and Asia, and consistently showing dramatic increases; Egypt enjoys an important number of trade agreements with most of those countries (EU Agreement, Arab Free Trade Agreement, COMESA Agreement). Nowadays, Elsewedy Cables is exporting approximately 60% of its total turnover (export value of 550 \$US million in 2006, 1 \$US billion in 2007). For that reason, the group is concentrating efforts and making investments to target market segments and countries world wide with strong growth potential, such as Europe, Asia, or Latin America, although strengthen its leadership in Africa and Middle East.

Elsewedy Cables' mission is to become world expert in cables, with a strong financial basis and technical advanced product portfolio, making it an attractive partner for all its stakeholders: Shareholders, customers, suppliers, and employees.

Group History

- 1938 ELSEWEDY family started its business as a trader in electrical equipment.
- 1960 The business was developed further by turning into a distributor for the only cables manufacturer at that time.
- 1984 Based on their experience in that field, the Family decided to build Egypt's first private sector cables factory "ARAB CABLES".
- 1986 Arab cables started production, as Egypt's and the Middle East's first private sector cables supplier.
- 1986-96 Arab cables' capacity quadruples from around 6.000 tons of copper cables in 1986 to 30.000 tons in 1996.
- 1996 ELSEWEDY family established their second cables factory, "EGYTECH CABLES", which is the most advanced cables production facility in the Middle East with an annual production capacity of 30.000 tons of copper cables and 15.000 tons of aluminum cables.
- ELSEWEDY family established their first plant for producing PVC compounds and master batch for cables insulation "SEDPLAST" considered as major component for the production of cables.
- 1997 ELSEWEDY family established "UNITED INDUSTRIES", the company consists of three different factories specialized in the production of special cables (first factory in Egypt), Winding Wires & Fiber Glass Poles.
- ELSEWEDY family established "ELASTIMOLD EGYPT", as a joint venture with Elastimold, a unit of Thomas & Betts, one of the leading companies worldwide in the field of cable accessories, to produce power cable joints and Modular Terminators.
- 1998 ELSEWEDY family Established "UNITED METALS CO." Egypt's first factory to produce High Grade Copper Rods, the main component in the production of cables conductors. The factory is considered as the largest copper rod factory in the Middle East region.
- ELSEWEDY family established "ELSEWEDY SEDCO", as the first and only factory in Africa and the Middle East producing cable accessories.
- 2002 ELSEWEDY CABLES their first cable factory outside Egypt "GIAD ELSEWEDY CABLES" in partnership with the Sudanese company Giad for the production of power cables, over head conductors and telephone cables.

- 2003 ELSEWEDY CABLES further enhances their facilities outside Egypt by establishing the "SUDANESE EGYPTIAN ELECTRICAL INDUSTRIES CO" in partnership with Sudanese electricity authority.
SUDATRAF (specialized in manufacturing transformers, electrical panels & cables joint and terminators).
- 2004 Together ELSEWEDY CABLES Group & Italsmea company (Italy) established a joint venture for the manufactory of explosion proof electrical equipment. "Italsmea ELSEWEDY co.
- 2005 ELSEWEDY established the Syria's latest cables factory "ELSEWEDY CABLES SYRIA" specialized in power cables manufacturing up to 400 Kv , relying on the growth in the area of: Syria, Lebanon, Jordan, Iraq, Iran, Palestine and all Arab countries near by.
- 2006 ELSEWEDY CABLES penetrated Ghana, by establishing "ELSEWEDY ELECTRIC-GHANA" the factory is specialized in Fiber Glass Road Lighting Poles manufacturing.
- 2007 ELSEWEDY CABLES established two new factories:
1 "ELSEWEDY CABLES SAUDI ARABIA" specialized in wires and cables.
2 "ELSEWEDY ELECTRIC SYRIA" specialized in transformers.
3 Acquisition of ISKRAEMECO Specialized in energy measurement & management systems.
- 2008 ELSEWEDY CABLES established two new factories:
1 "ELSEWEDY CABLES QATAR" specialized in power cables "Low & Medium".
2 "ELSEWEDY CABLES ALGERIA" specialized in power cables "Low & Medium" in addition to instrumentation cables.

CABLES

Introduction to LSHF Cables

“In a fire accident some people die because of the Fire, other die because of the smoke.”

In theaters, hotels, hospitals and all closed public places we can not afford losing people by suffocation
Fire safety engineering in building design and execution plays a major role worldwide,

Alongside this process comes the requirements for electrical installations to provide greater fire protection for buildings and a safer environment for the people who use them

Elsewedy Cables has made its contribution to safe people life by reducing the smoke rate in the fire accidents by presenting a LSHF range for power and wiring cables.

Why to use Elsewedy Cables LSHF

1 - Elsewedy Cables LSHF does not contain halogen:

Hydrochloric acid is not formed during the fire, so there is no hazard of suffocation by inhalation of this highly irritant chemical

2 - Elsewedy Cables LSHF reduces smoke to the minimum:

Reducing the confusion, panic and suffocation ratio, which allow people to survive

3 - Elsewedy Cables LSHF reduces fire propagation:

By being slow to burn, Extending the escape time and reducing the immediate hazard.

4 - Elsewedy Cables LSHF resists ignition:

Extending the time before cables start to burn in a fire providing people light, visibility and time to escape

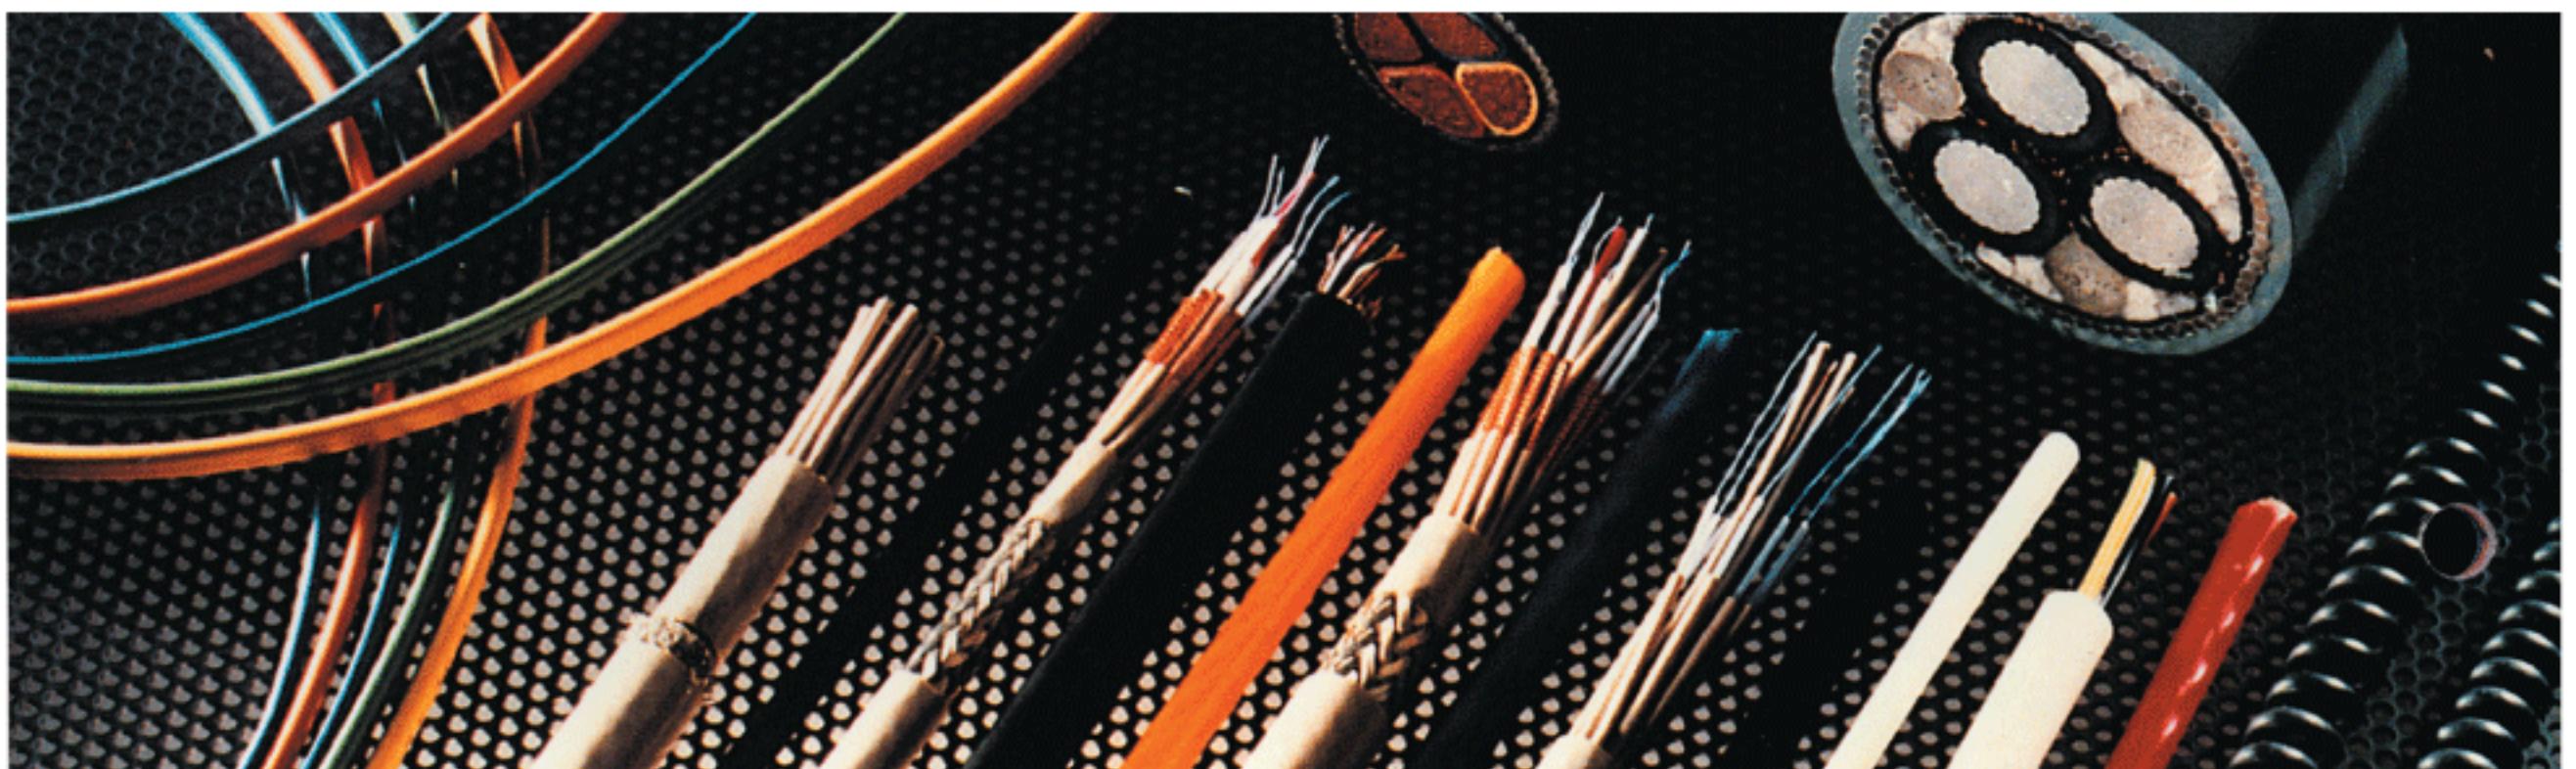

Elsewedy Cables LSHF

- Allows people to see and breath safely for longer time.
- Increases time for people to escape.
- Reduces damage of buildings and electronic equipment.
- Elsewedy cables LSHF improves safety and human survival in a fire.

LSHF Tests

Traditional PVC sheathed cable on burning emits acidic gases which cause intensive irritation to the eyes and lungs and cause long term damage to electronic equipments such as computers.

Testing Halogen Free cables is conducted according to IEC 60754 and BS EN 50267 which specifies the weight of the cable material is decomposed and the evolved acidic gas is measured, it should be less than 0.5%.

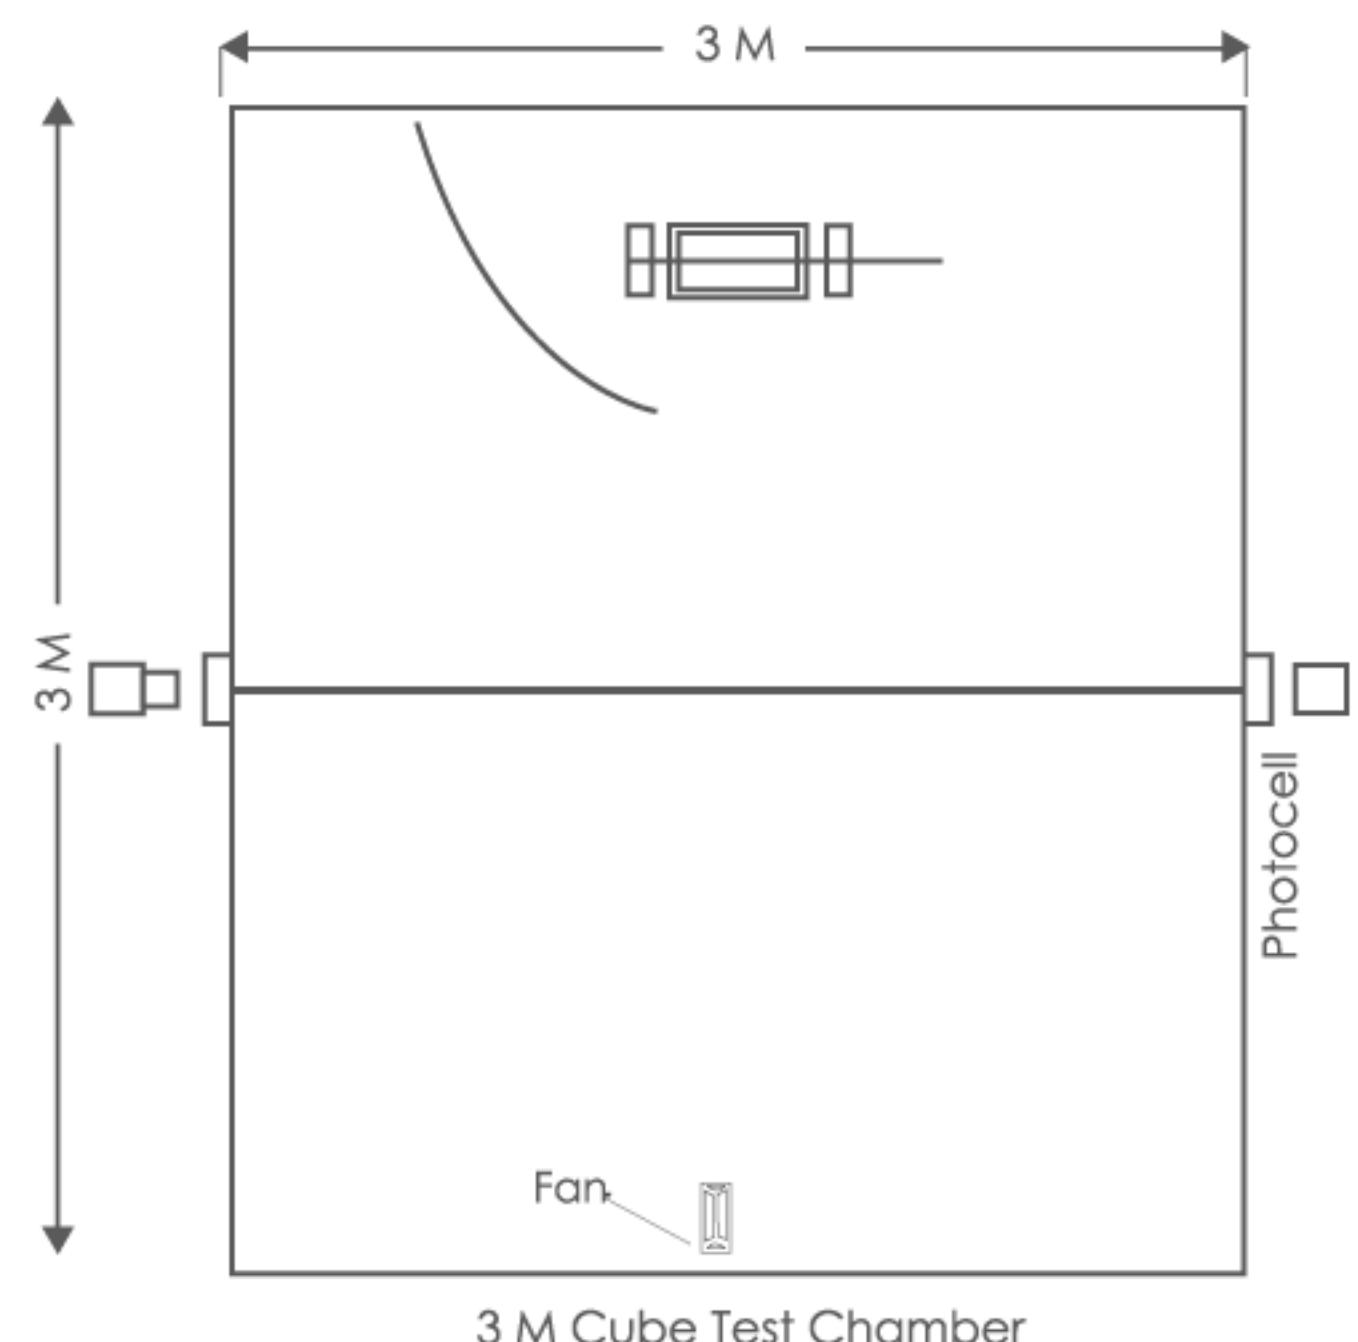

Determination of the Amount of Halogen Acid Gas & Measurement of the Smoke Density of Cables:

It is a fact that most of the hazardous during fire comes from the black dense smoke emission which reduces the visibility to a point that people may not attempt to escape.

By the term low smoke we mean cables which on burning do not emit black dense smoke, so it makes the surroundings clearer and easier for people to escape during fire.

Testing of low smoke emission is conducted according to IEC 61034 & BS EN 61034 which specified as 3 M cube chamber as indicated in the figure where we start to burn a cable sample and measure the light transmission by means of photocell during the time of burning. The test is considered as ended when there is no decrease in light transmittance for 5 min. after the fire source has extinguished or when the test duration reaches 40 min.

The cable is considered as low smoke halogen free if the light transmission reduced to a certain value from the starting one at the end of the testing time.

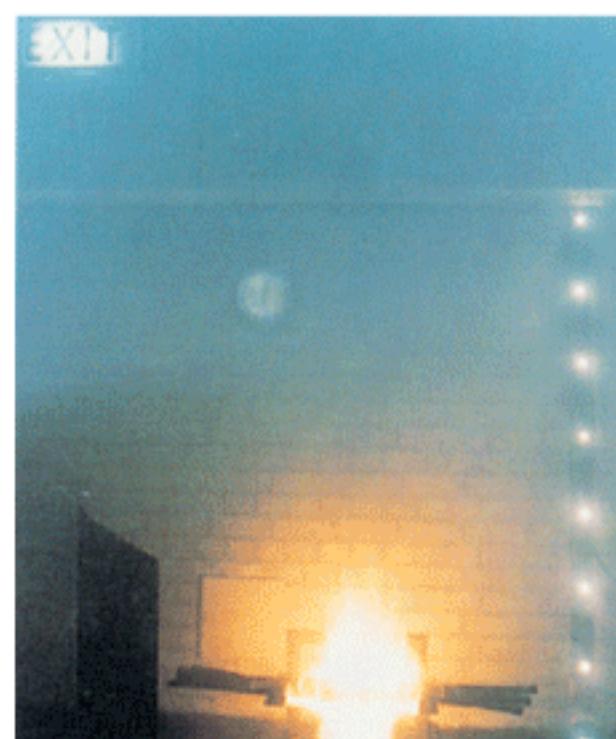

Plan of Low Smoke Halogen Free test chamber according to IEC 61034 & BS EN 61034

The 3 Meter Cube Smoke Test Chamber

Photos in the upper side for PVC sheathed cables and lower side shows the LSHF sheathed cables.

PVC Cables: 3 mins

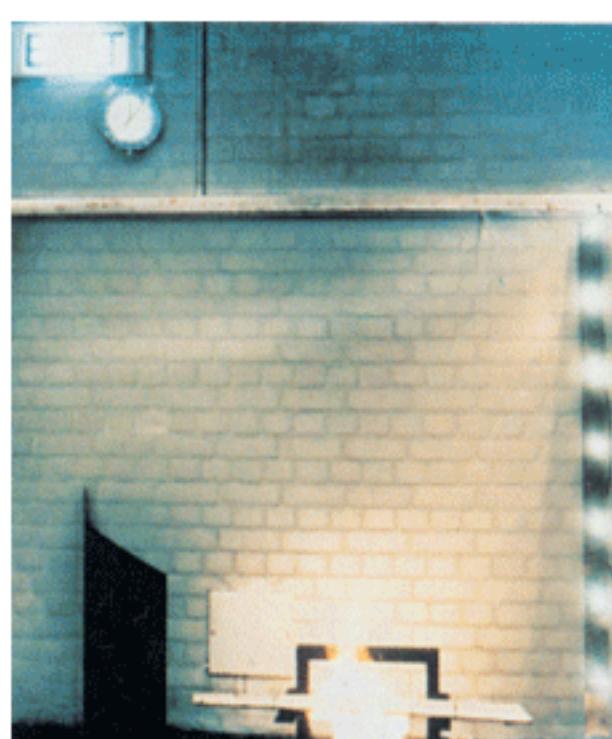

PVC Cables: 6 mins

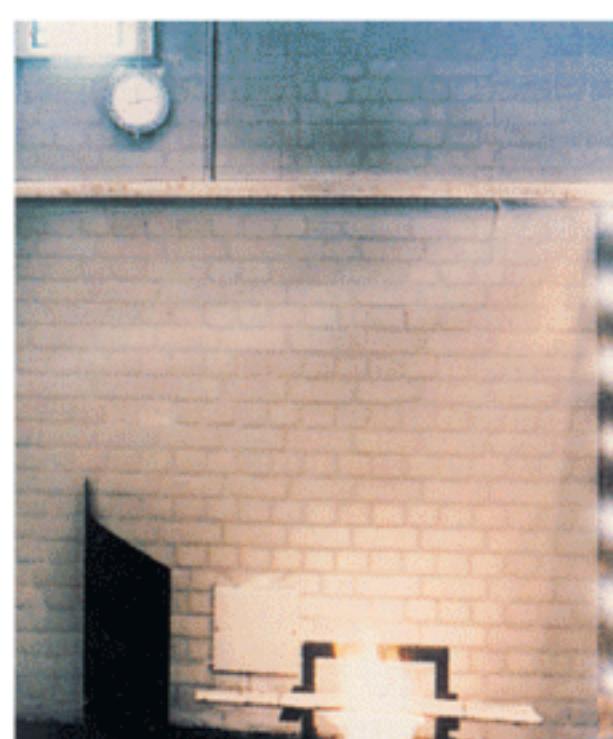

LSHF: 30 sec

LSHF: 3 mins

LSHF: 6 mins

LSHF: 12 mins

Comparison between traditional PVC & Low Smoke Halogen Free Cables
when tested in accordance to IEC 61034

The comparative figure above shows the difference between the behaviour of traditional PVC and low smoke halogen free sheathed cables when tested for low smoke emission according to IEC 61034. This property helps making the public places like underground tunnels, hospitals, hotels, etc, more safer and easier for evacuation during the fire conditions.

Flame Retardant Test

In fire condition, cables are acting as a network to propagate the flame along their length such that the traditional cables and the flame to spread everywhere beside the flame location. By the term flame retardant cables we mean using material in the cable manufacturing specially sheathing material to reduce the propagation of flame.

Testing flame retardant cables is done in accordance with IEC 60332 which specifies different parts for the test depending on the number of cables or wires, single or bunched. The figure shows the test chamber specified in IEC 60332 part 3 where a number of cable samples 3.5 meter length, determined by the total volume of non metallic material in the cable, are hanged and subjected to flame for 20 or 40 minutes and during the test time an air flow with specific rate is maintained by means of blower in the whole chamber.

The cable is considered as flame retardant if the flame did not propagate along the cable for more than 2.5 m after the flame is ceased.

Application

- Power stations.
- Petrochemical plants.
- Off shore oil platforms.
- Industrial areas.

Standard Specification

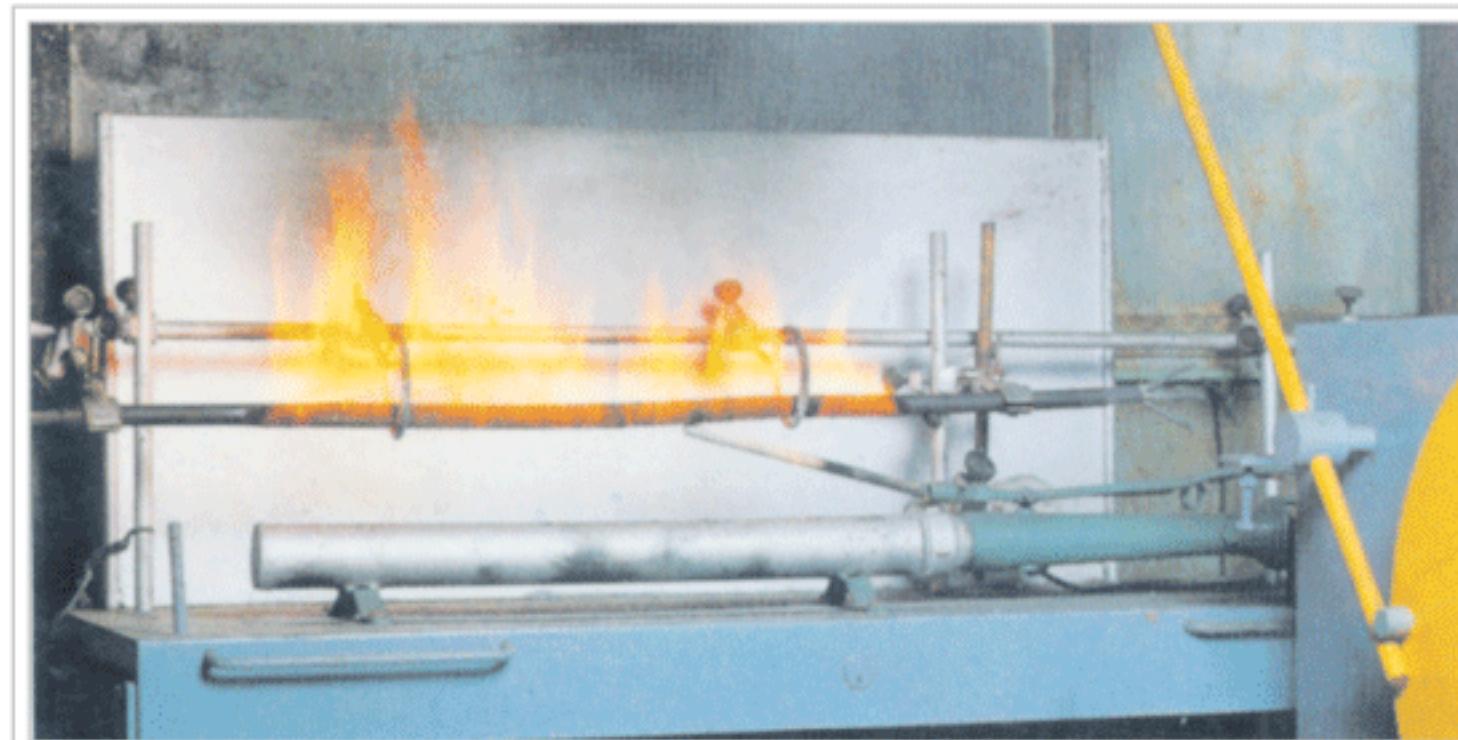

- IEC 60332
- BS EN 50266
- BS EN 60332

Fire Resistant Cables

The most important feature during fire condition is that the fire alarm circuit is working under the fire, in case the cables connecting the fire alarm circuits are burnt the whole alarm system is useless.

So there was a great need for a type of cables which operate under the fire conditions. Fire resistance cables provide a good system for emergency circuits where the integrity of the electric network is maintained during the fire conditions.

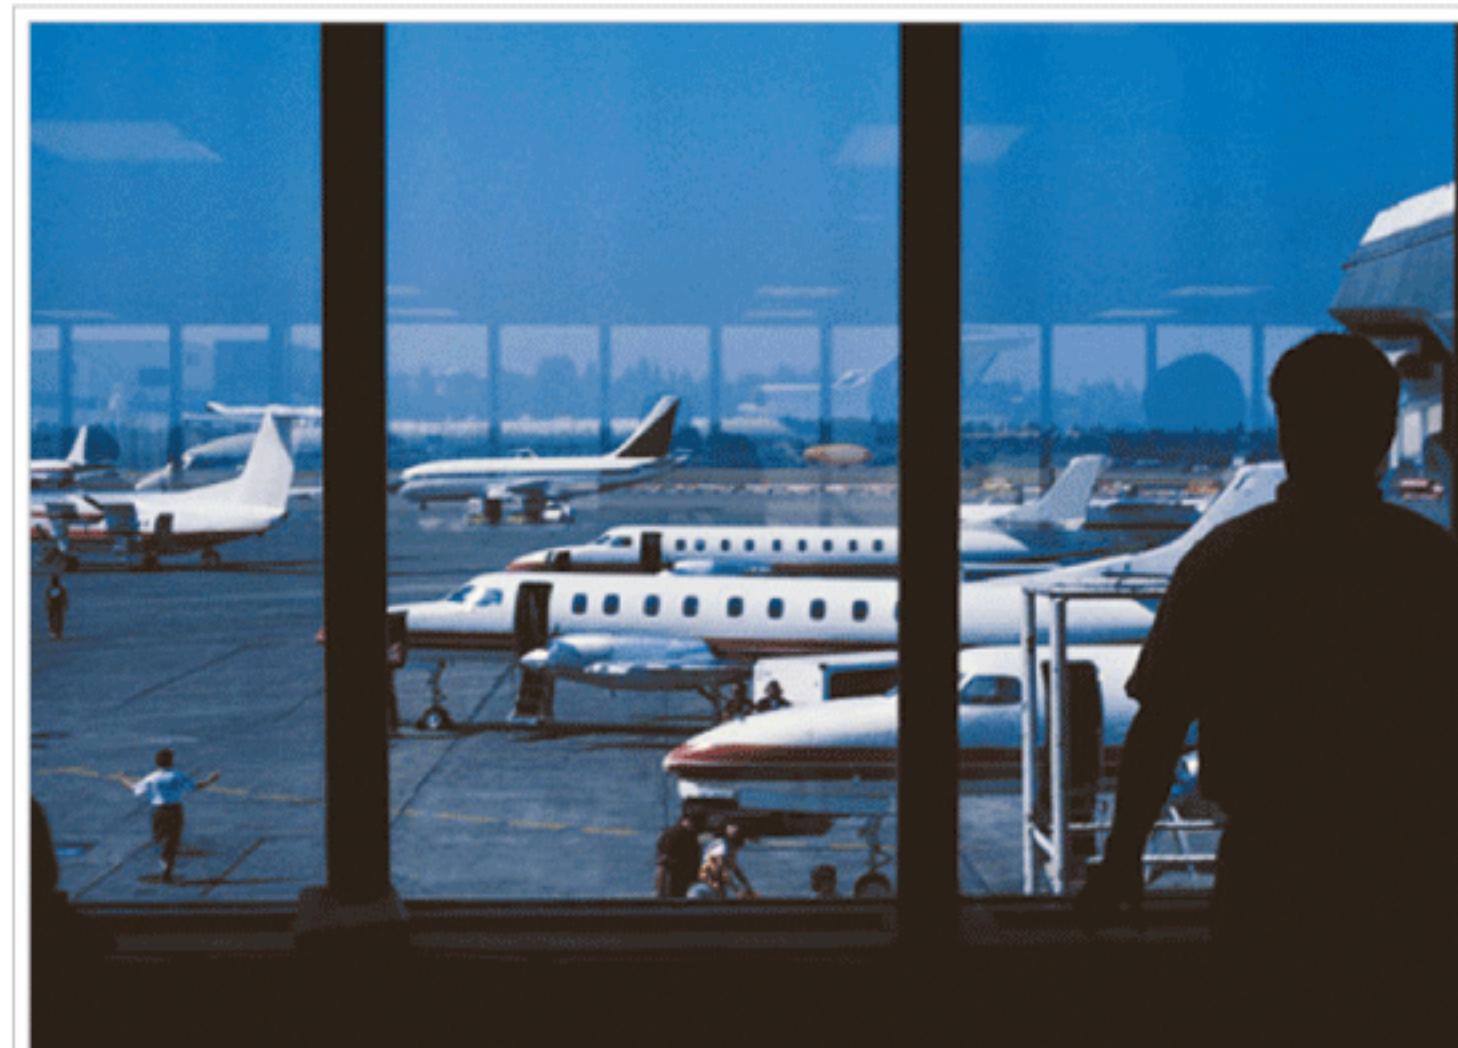

Testing of this property is conducted according to IEC 60331 which requires one meter of cable to be hanged and subjected to flame at 750 C for 90 min. and also according to BS 6387-which required one meter cable to be hanged and subjected to flame at 950 ± 40 C for 180 min.

Fire Alarm Cables

Fire alarm cables are widely used in fire alarm systems, where the integrity of the circuit is required during the fire conditions for example:

- Hotels.
- Hospitals.
- Airport Terminals.
- Large public buildings.

Standard Specification

IEC 60331.

Metals Used for Cables

Table 1

Electrical properties

Metal	Relative conductivity Copper 100	Electrical resistivity at 20 °C ohm. m (10 ⁻⁸)	Temperature coefficient of resistance per °C
Copper (annealed)	100	1.7241	0.00393
Aluminium	61	2.8264	0.00403

Physical properties

Property	Unit	Copper	Aluminium
Density at 20 °C	kg / m ³	8890.0	2703.0
Coeff. thermal expansion	Per °C x 10 ⁻⁶	17.0	23.0
Melting point	°C	1083.0	659.0
Thermal conductivity	W/cm °C	3.8	2.4
Ultimate tensile strength	Mn/m ²	225.0	70-90

Cable ampacity

Cable ampacity or current carrying capacity is defined as the continuous maximum current the cable can carry at its maximum operating temperature.

In the technical information tables the following installation conditions were assumed during the current calculation:

- Ambient air temperature = 40 °C
- Ground temperature = 35 °C
- Ground thermal resistivity = 120 °C. Cm/Watt
- Burial depth = 0.5 Mt.

- In case of different installation conditions from the stated, the derating factors tabulated in tables 2 to 9 must be used in calculating the new current carrying capacity.

Derating Factors

1	1.00	1.00	1.00	1.00	1.00	-	
2	1.00	0.99	0.98	0.97	0.96	-	
3	1.00	0.98	0.97	0.96	0.93	-	

NOTE 1 Values given are averages for the cable types and range of conductor sizes considered. The spread of values is generally less than 5%.

NOTE 2 Factors apply to single layer groups of cables as shown above and do not apply when cables are installed in more than one layer touching each other. Values for such installations may be significantly lower and must be determined by an appropriate method.

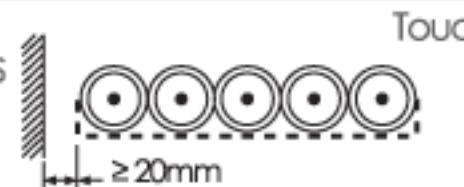

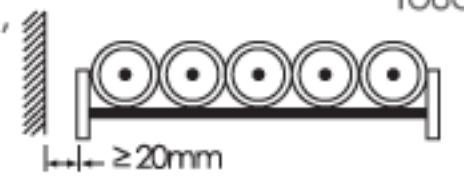

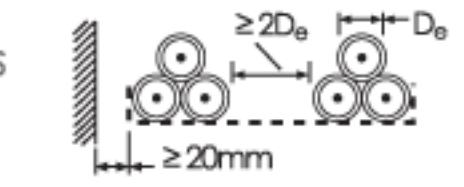

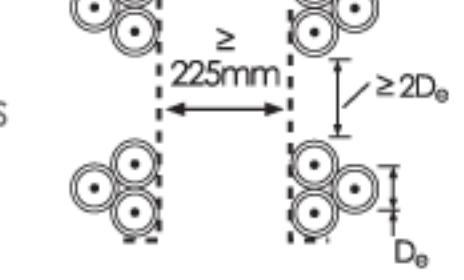

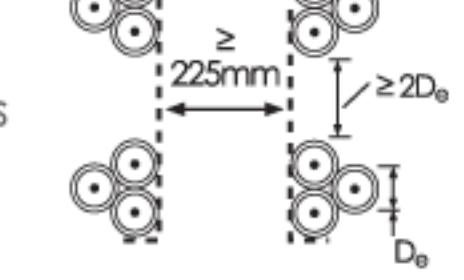

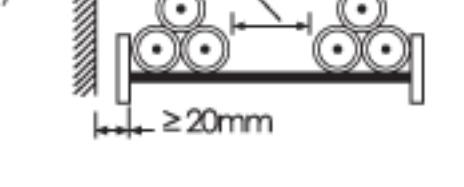

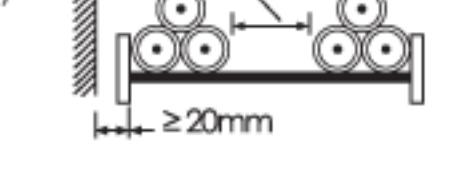

NOTE 3 Values are given for vertical spacing between trays of 300 mm and at least 20 mm between trays and wall. For closer spacing, the factors should be reduced.

NOTE 4 Values are given for horizontal spacing between trays of 225 mm with trays mounted back to back. For closer spacing the factors should be reduced.

Table 9

Reduction factors for groups of more than one circuit of single-core cables (Note 2)
To be applied to the current-carrying capacity for one circuit of single-core cables in free air

Number of Trays	Number of circuits			Use as a multiplier to rating for	Method of installation
	1	2	3		
1	0.98	0.91	0.87	Three cables in horizontal formation	Perforated trays (Note 3) 
2	0.96	0.87	0.81		
3	0.95	0.85	0.78		
				Three cables in horizontal formation	Ladder supports, cleats, etc. (Note 3) 
1	1.00	0.97	0.96		
2	0.98	0.93	0.89		
3	0.97	0.90	0.86		
				Three cables in trefoil formation	Perforated trays (Note 3) 
1	1.00	0.98	0.96		
2	0.97	0.93	0.89		
3	0.96	0.92	0.86		
				Vertical perforated trays (Note 4) 	Spaced 
1	1.00	0.91	0.89		
2	1.00	0.90	0.86		
				Ladder supports, cleats, etc. (Note 3) 	Spaced 
1	1.00	1.00	1.00		
2	0.97	0.95	0.93		
3	0.96	0.94	0.90		

NOTE 1 Values given are averages for the cable types and range of conductor sizes considered. The spread of values is generally less than 5%.

NOTE 2 Factors are given for single layers of cables (or trefoil groups) as shown in the table and do not apply when cables are installed in more than one layer touching each other. Values for such installations may be significantly lower and should be determined by an appropriate method.

NOTE 3 Values are given for vertical spacings between trays of 300 mm. For closer spacing, the factors should be reduced.

NOTE 4 Values are given for horizontal spacing between trays of 225 mm with trays mounted back to back. For closer spacing, the factors should be reduced.

NOTE 5 For circuits having more than one cable in parallel per phase, each three phase set of conductors should be considered as a circuit for the purpose of this table.

Max. operating temp: 90 °C for XLPE

Power factor : 0.8 Rated frequency: 50 HZ

Cables are touched in flat formation

Low Voltage LSHF Cables

Operating Voltage (up to 0.6/1 kV)

Cable Construction

1. Conductor:

Copper or Aluminium conductors, solid, flexible or stranded with round or sectoral shaped conductors.

2. Insulation:

An extruded layer of XLPE is applied over the conductor. Insulated cables are suitable for maximum conductor operating temperature of 90 °C.

3. Assembly:

In case of multicore cables cores are assembled together.

4. Bedding:

In case of armoured cables an extruded layer of LSHF is applied as bedding.

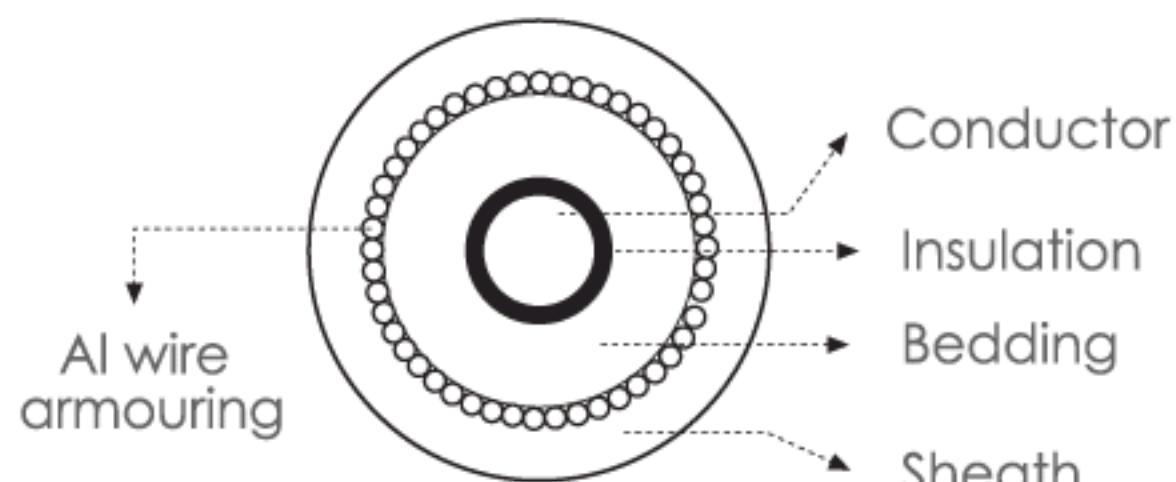

5. Armouring:

Steel Wire: Galvanized steel wires are applied helically.

6. Sheath:

An extruded layer of LSHF is applied as an outer sheath.

Armouring of single Core Cable

Armouring of Single Core Cable

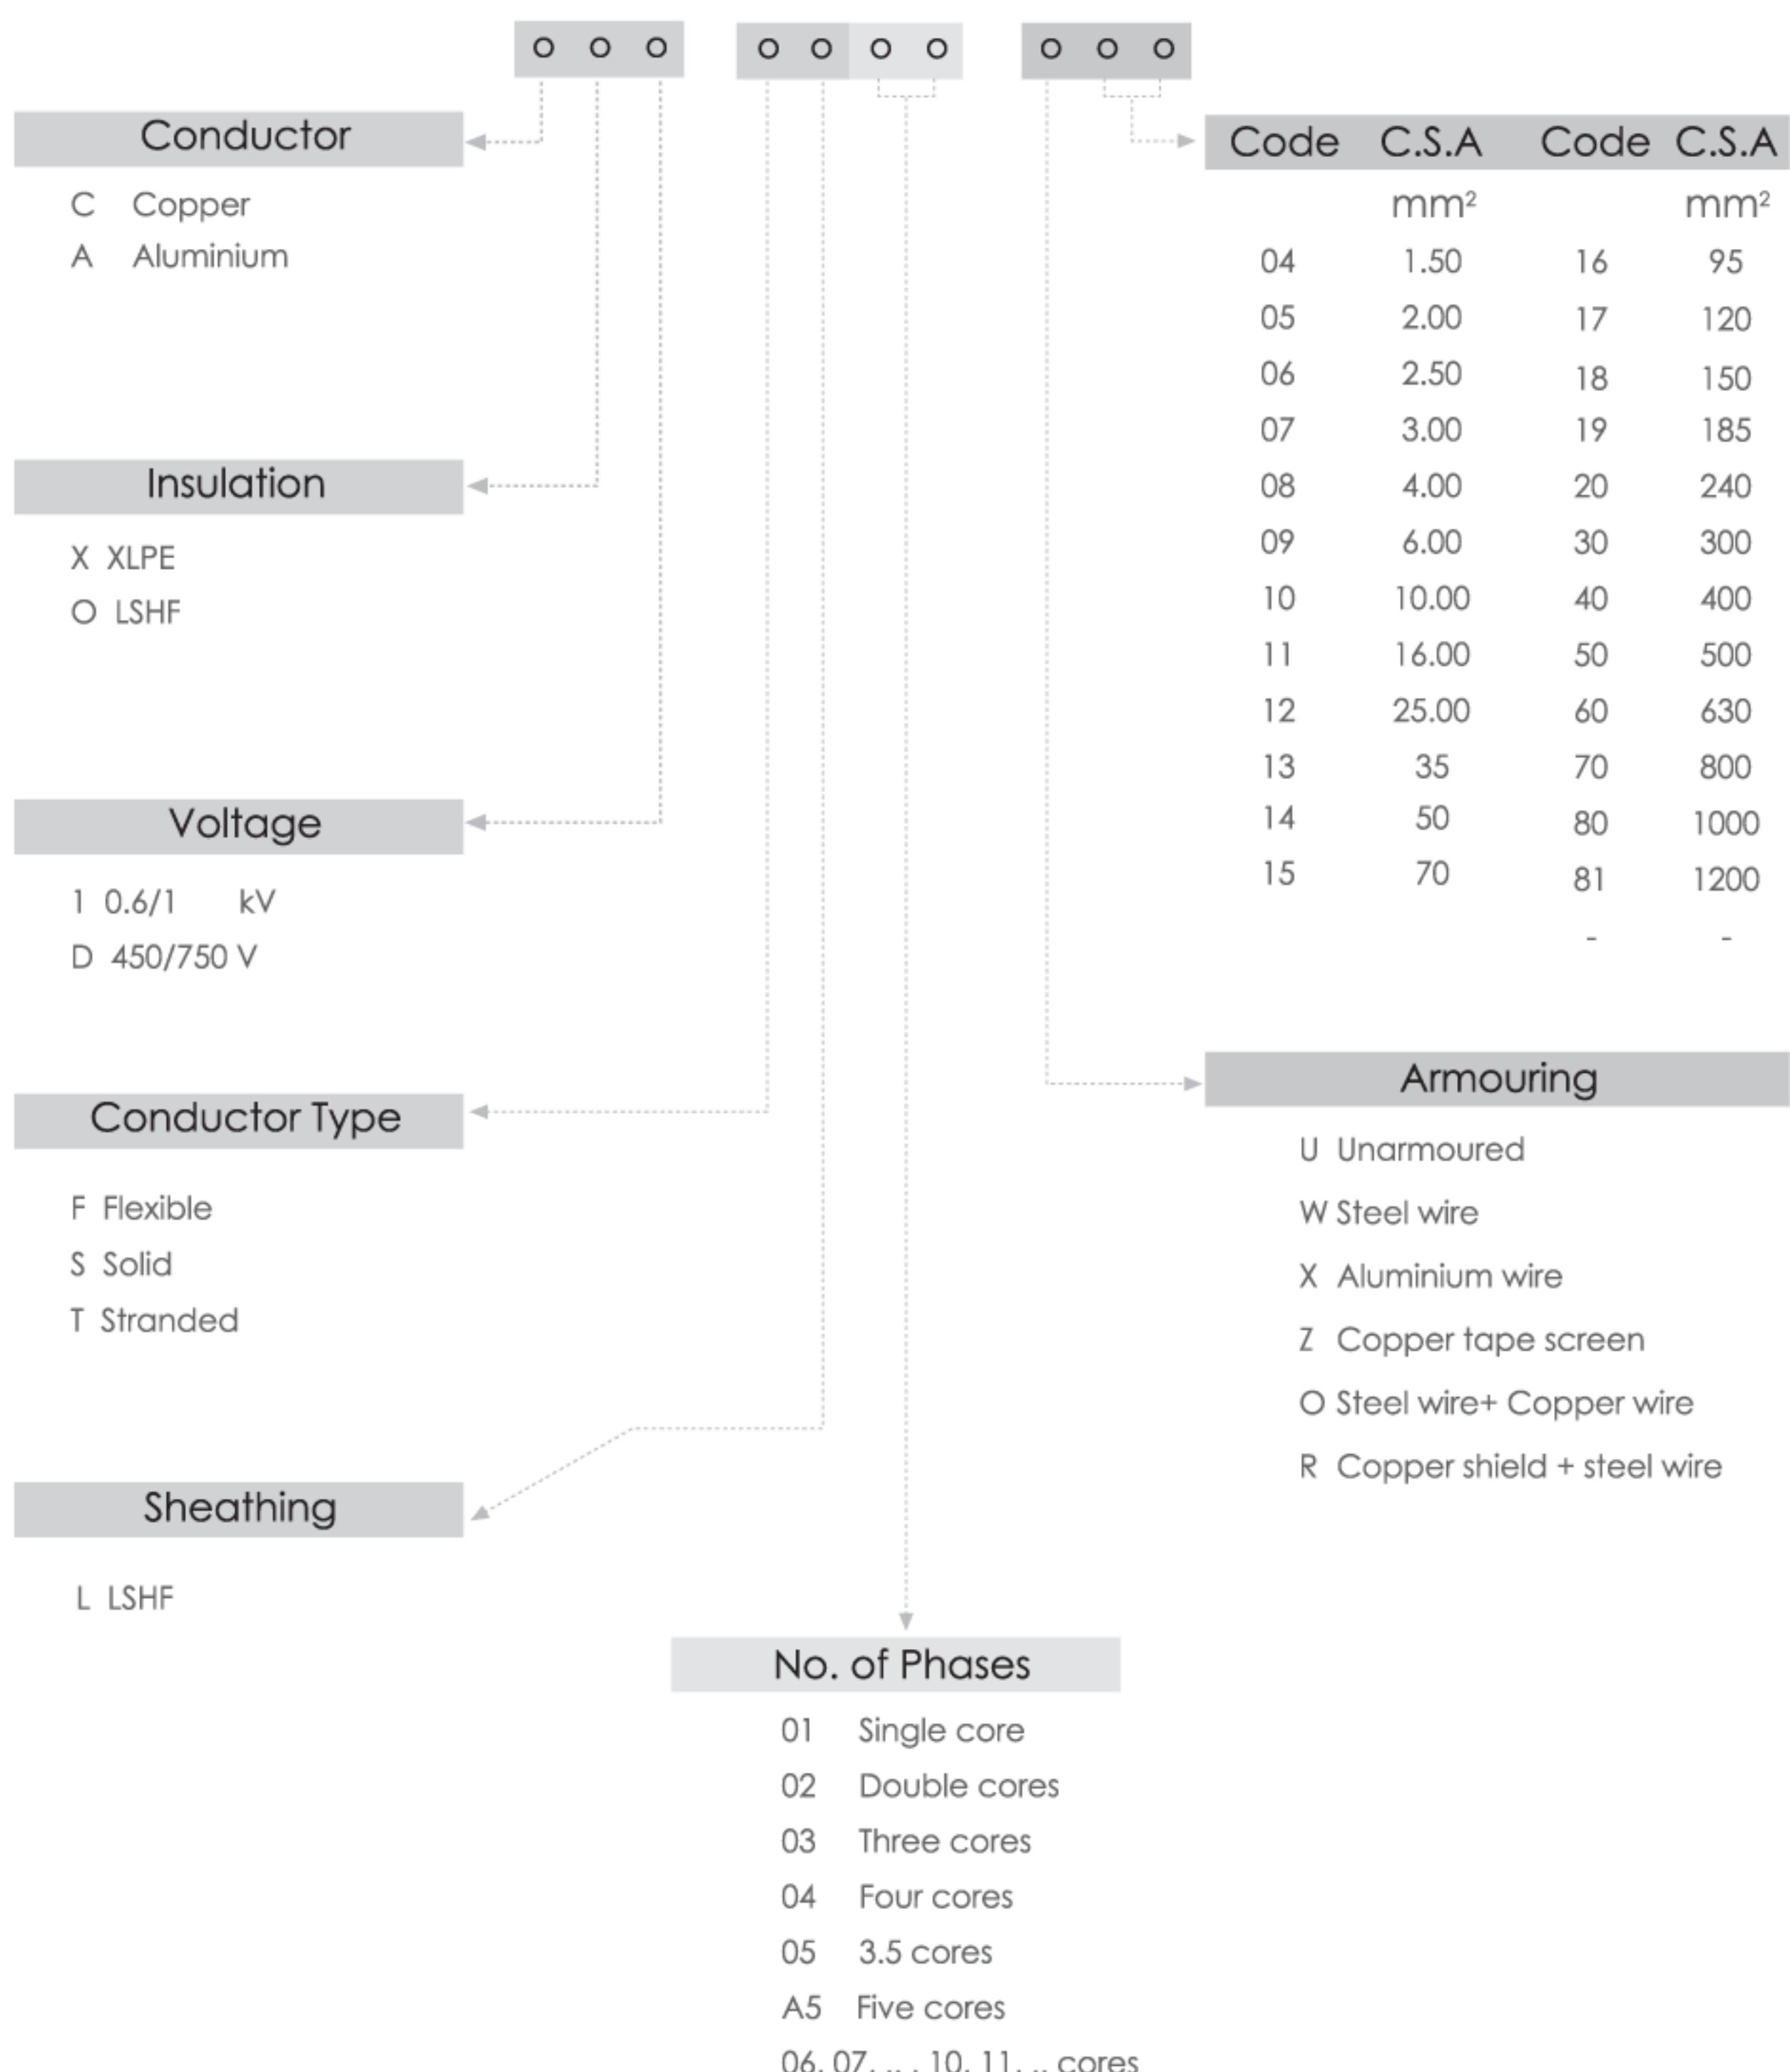

Armouring by non-magnetic material such as Aluminium Wire armouring to reduce the magnetic losses.

System designation for Low Voltage Cable

You can order our product by giving the following information:

1. Cable code as per the catalogue.
2. If your required cable is out of our catalogue range, you can use the following codes to determine your cable.

Single Core Cables with Solid or Stranded Copper Conductors and LSHF Insulated

(450/750 V)

Description

- Soft annealed solid or stranded Copper conductors insulated with LSHF compound rated 90 °c according to BS 7211 and BS EN 60332-1.

Application

For indoor fixed installations in dry locations, laid in conduits, as well as in steel support brackets.

re : round, Solid

rm : round, Stranded

Description

- Soft annealed Copper fine wires, bunched together in sub - units or stranded bunched groups into a main units, which forms the flexible conductor. Insulated with LHSF compound rated 90 °C.
- Cables are produced according to BS 7211 and BS EN 60332-1

Application

For indoor fixed installations in dry locations, where particular flexibility is required. For electrical panels connection or for electrical apparatus they can be laid in groups around steeek sheets.

Product - code	Nominal cross sectional area	Max. Conductor resistance		Current rating in air

Single Core Cables, with Stranded Circular Copper Conductors, XLPE Insulated and LSHF Sheathed

Description

- Soft annealed stranded Copper or Aluminium conductor. Insulated with XLPE compound rated 90 °C and sheathed with LSHF Compound layer.
- Cables are produced according to IEC 60502-1 and IEC 60332-1

Application

For outdoor and indoor installations in damp and wet locations. They are normally used for power distribution in urban networks, industrial plants, as well as in thermopower and hydropower stations.

Multicore Cables, with Stranded, Copper Conductors, XLPE Insulated and LSHF Sheathed

Description

- Multicore cables of stranded Copper conductors are insulated with XLPE compound, assembled together and covered with an overall jacket of LSHF compound.
- Cables are produced according to IEC 60502-1.

Application

For outdoor and indoor installations in damp and wet locations. They are normally used for power distribution in urban networks, in industrial plants, as well as in Thermopower and Hydropower stations.

Multicore Cables, with Stranded, Aluminum Conductors, XLPE Insulated and LSHF Sheathed

Description

- Multicore cables of stranded Aluminium conductors are insulated with XLPE compound, assembled together and covered with an overall jacket of LSHF compound.
- Cables are produced according to IEC 60502.

Application

For outdoor and indoor installations in damp and wet locations. They are normally used for power distribution in urban networks, in industrial plants, as well as in Thermopower and Hydropower stations.

Multicore Cables, with Stranded Copper Conductors, XLPE Insulated, Steel Wire Armoured and LSHF Sheathed

Description

- Multicore cables of stranded Copper conductors are insulated with XLPE compound, cores are assembled together, extruded LSHF bedding armoured with steel wires and covered with an overall jacket of LSHF compound.
- Cables are produced according to IEC 60502-1 or BS 6724

Application

For outdoor installations in damp wet locations where mechanical damages are expected to occur.

TEST REPORT		TEST REPORT	
Report no.	7087006-HVL 06-1226	Report no.	70870140-HVL 06-1385
Client	ELSEWEDY CABLES 10th of Ramadan City Egypt	Client	Egyptech Cables - Elsewedy PC. # 36A, South (A1), Industrial Region (A1) 10th Of Ramadan City Egypt
Reference	-	Concerning	tests
Concerning	test	Date	13 November up to and including 22 December 2006
Date	26 July – 14 August 2006	Place	KEMA High-Voltage Laboratory, Arnhem, the Netherlands
Place	High-Voltage Laboratory of KEMA Nederland B.V., Arnhem, the Netherlands	Object	600/1000 V LV cable
Object	0,6/1 kV electric cable	Type	4x300 mm ² , CU/XLPE/SWA/LSHF
Manufacturer	same as client	Manufacturer	Egyptech Cables - Elsewedy, Egypt
REQUIREMENTS The requirements as specified in the standards BS EN 50287-2-1 (1999), BS EN 50287-2-2 (1999), BS EN 61034-1 (2005), BS EN 61034-2 (2005) and BS EN 50286-2-4 (2001).			
TEST PROGRAMME The programme was specified by the client and was as follows: 1. Determination of the amount of halogen acid gas. 2. Determination of degree of acidity of gases by measuring pH and conductivity. 3. Measurement of smoke density of cables burning under defined conditions. 4. Test for vertical flame spread of vertically-mounted bunched wires or cables - category C.			
SUMMARY AND CONCLUSION The results obtained relate only to the work ordered and to the material tested. The tests were passed.
